EMERGENCY INTERCOM SOLUTIONS

The Impact of Emergency Phones

Over the past decades, you may have noticed the implementation of emergency phones throughout many public spaces like parking garages and college campuses. These devices connect callers directly to a security officer or dispatch center, who will then notify the appropriate authorities to respond to the situation. In a time of danger, they can act as an efficient and effective crisis management solution.

Instant Operator Assistance

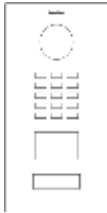

WWW.ITTENDANT.COM

VITAL COMMUNICATION

HOW IT WORKS

DoorBird IP intercom is deployed In elevators, call boxes or Blue light towers.

This provides audio and video communications via the DoorBird app

The Ittendant SIP Cloud enables the audio call via telephone to security personnel or to a 24/7 emergency call center...

- ☐ Call is logged with fixed caller ID for location
- ☐ Call can last up to 30 minutes
- ☐ Operator can call back to station

ittendant

The 24/7 emergency call center operator
Can receive the call. Through caller ID identify
The location and communicate with intercom.
They can determine the assistance needed and
and guide or dispatch the appropriate services.

*Note: The installer may need to be a licensed alarm installer
In many locations around the USA this is a requirement.*
